INTRODUCTION

Background to Enquiry

1. The Committee have for some years been concerned to establish the extent of student success and failure in degree courses, particularly in view of the substantial investment of resources involved. They have also appreciated the distress caused to young people who have to leave their university without obtaining the degree qualification which they had hoped to obtain when they entered. From time to time the Committee have, therefore, conducted enquiries to establish the facts from which the extent of the problem can be judged, and on which any necessary action may be based.

2. In 1952 they conducted an enquiry into the progress by the end of their first year of students who had entered universities in 1950; and they later carried out a similar enquiry about students who had entered in 1954. Subsequently they instituted three further enquiries embracing the full period of a degree course. An account of these surveys is to be found in paragraphs 80 to 89 of ' University Development 1957–62 ' (Cmnd. 2267). Briefly, they covered the success or failure of undergraduate students admitted in October 1952, October 1955 and October 1957. The last of these enquiries covered a greater range of faculties than the earlier ones and it also provided information about the reasons for failure (i.e., academic, disciplinary, illness or other) and the year of study in which withdrawal from the university had occurred. Material drawn from the last of these enquiries was published in Appendix Two (A) Part IV of the Robbins Report.

3. The Committee had it in mind to carry out a further enquiry as soon as the time seemed opportune and in 1967, following consultation and agreement with the Committee of Vice-Chancellors and Principals, the present survey was instituted. It is the intention to carry out further surveys at intervals. The results of the present survey are summarised in this report.

4. In the past, the Committee have taken the view that, since misinterpretation of the detailed figures is so easy, the figures supplied by individual universities should be treated as confidential. They have therefore published only aggregate figures for Great Britain—supplemented with figures for certain unnamed universities in the Robbins Committee Report. On this occasion, however, it was thought that the dangers of misinterpretation were outweighed by the importance of making all the relevant facts fully available. The Committee therefore decided from the outset—with the full concurrence of the Vice-Chancellors' Committee—to publish the information collected as a result of this survey both by subject groups and separately for each institution.

5. The extraction of the relevant information from their records has been a major undertaking for university administrations, and the Committee are grateful for the work they have done to make this analysis possible. It is the Committee alone, of course, that takes the responsibility for the analysis of the material supplied, and for the presentation of the results.

Printed image digitised by the University of Southampton Library Digitisation Unit

Nature and Scope of Enquiry

6. The Committee have thought it right to continue to direct their attention, in this matter, primarily to the success or failure of students entering on undergraduate courses. As on previous occasions, the survey has therefore been limited to them: postgraduate and post-experience students, and students entering on courses which do not lead to a first degree, were excluded.

7. Undergraduate courses in different fields of study and at different universities may vary in length. To take account of this and at the same time to ensure that the information would be as up-to-date as possible, it was decided to measure the progress of students belonging to a potential graduate output in a given recent year, rather than (as in the past) students comprising the actual undergraduate input in an earlier given year. At the same time, the output-year chosen was such as to allow progress to be up-dated by a full academic year of further possible achievement. It was therefore decided to take as the group to be surveyed those students who would normally have been expected to qualify in the summer of 1966. This made it possible to take into account the success or failure of those who stayed on for the academic year 1966-67 and to record the continuance or non-continuance of the remainder in 1967-68. Since, therefore, the survey relates to students who would normally have graduated at the end of the academic year 1965-66, it covers the cohorts of students entering on 3-year courses in 1963–64, on 4-year courses in 1962–63, on 5-year courses in 1961–62 and on 6-year courses in 1960–61.

8. The survey covered all universities in Great Britain, irrespective of whether or not they had achieved university status at the time when the relevant cohorts of students began their courses. Certain special problems arising from this are referred to below.

9. The following were the main categories into which the students covered by the survey were analysed:

(1) The survey distinguished five stages of progress: degree achieved in normal period; degree achieved in more than the normal period; re-admission in 1967; sat and failed degree; and withdrawal before completing course.

(2) It sub-divided those leaving without obtaining a first degree into academic, disciplinary, illness or other reasons.

(3) It established at what stage—essentially, in which year of the course—the loss of students occurred.

(4) In general, it identified students by both sex and origin (home or overseas).

The analysis provided for over 1 million cells of figures. Those which are thought to be most relevant and important are shown in the accompanying published tables, as listed on pages iii and iv.

Terminology

10. The word "wastage" has been avoided, although it would be the word normally used in a statistical report of this kind, lest it should be taken to imply that all students who failed (for whatever reason) to qualify for a first degree had necessarily wasted the time spent at a university or were permanently lost to the pool of qualified manpower. A number of the students will have transferred to other courses leading to different qualifications (e.g. Higher National Certificates, College Diplomas and graduateships of professional institutions) but information about the extent to which this has taken place is not available in universities and was, therefore, not included in the present survey.

Printed image digitised by the University of Southampton Library Digitisation Unit

11. Within the overall category of students who failed to qualify for a first degree—whether this was due to failure in final examinations or to withdrawal during the course—those students who left the university before taking their final examinations (irrespective of whether they left of their own accord or not) are referred to as having 'withdrawn' from their courses.

12. The term 'success' or 'success-rate' covers those who obtained a first degree either in the normal period or by the end of the further academic year 1966–67. Students have been recorded as having 'left without success' or ' failed to graduate ' if they left without obtaining a degree by the end of the academic year 1966–67. A small proportion of the students surveyed were re-admitted in October, 1967 and thus do not yet fall into either of these categories in the survey (see paragraph 22).

RELATIONSHIP WITH PREVIOUS SURVEYS

Previous Enquiries into Student Progress

13. Reference has been made in paragraph 2 to previous enquiries by the Committee into student progress. The two main sources of published statistics derived from these enquiries are:

(a) Robbins Report: Appendix Two (A), Part IV, Section 1, pages 125–133. This section in the Robbins Report, entitled ' Undergraduate Wastage in Universities' was based mainly on a series of surveys conducted by the University Grants Committee, in which universities were asked to record the subsequent performance of all full-time students entering to study for first degrees in specified years and faculties. Information was given for entrants in 1952, 1955 and 1957 to the faculties of Arts, Science and Technology, Agriculture and Medicine, Dentistry and Veterinary Science. There was some analysis of loss rates by year and faculty and by certain individual but unnamed universities, and by the year of leaving of unsuccessful undergraduates. Some indication of success within or outside the normal period was also given.

(b) University Development 1957–62, Chapter II, paragraphs 80–89, pages 29–33 (Cmnd. 2267). Figures derived from the enquiries on 1952, 1955 and 1957 student entries were presented mainly in a context of student progress. There was some limited elaboration of the figures that had already appeared in the Robbins Report.

Differences between current survey and previous surveys

14. Comparison with past figures on student progress is affected by the following main changes:

(a) *Group surveyed*

The essential difference between current and earlier surveys lies in identifying a given year's potential output rather than an earlier year's actual input. Accurate comparisons cannot thus be made between figures published in the past, when percentages were calculated on a specific year's intake (e.g. 1957) and the figures shown in this report, where percentages were calculated on a specific year's potential output (1966). Nevertheless, some percentage comparisons over time have been made later in this report, to indicate general orders of magnitude.

Printed image digitised by the University of Southampton Library Digitisation Unit

(b) *Number of institutions concerned*
The number of university institutions covered by the enquiry has increased. Some of the new universities came within the scope of this survey and a number of technological institutions have achieved university status since the last survey was carried out in 1961.

(c) *Subjects covered*
The subjects covered by surveys have been progressively increased: but this is the first time that all subjects have been covered.

(d) *Analysis by subject groups*
Previous surveys identified seven broad faculty groups: Arts and Social Studies; Science (Pure Science); Technology (Applied Science); Agriculture and Forestry; Medicine; Dentistry; Veterinary Science. On this occasion, the following 17 main fields of study have been separately identified: Arts; Social Studies; Business Management Studies; Physical Sciences; Mathematics and Computer Science; Biological Sciences; Engineering; Other Technologies; Medicine; Dentistry; Professions allied to Medicine and Health; Agriculture and Forestry; Veterinary Science; Architecture; Town Planning; Other Professional and Vocational Studies; Education. This conforms to the classification pattern now in use in U.G.C. statistics and is compatible with that in use in most other current official statistics of education.

(e) *Subject classification*
In addition to being more detailed, the basis of subject classification has changed since the earlier surveys were made. The system now in use defines by subject in accordance with a student's field of study rather than, as hitherto, in accordance with universities' faculty groupings. What is meant, for instance, by ' Pure Science ' for the 1952, 1955 and 1957 student entries is not the same as is implied by similar terminology to-day.

(f) *Normal period of study*
For this enquiry, universities were for the first time explicitly asked to distinguish students according to the normal length of their courses and to submit separate analyses for each length of course. Earlier enquiries had analysed the progress after four years of entrants in a given year, irrespective of their length of course. This has yielded valuable information, not previously available, both about variations in course lengths and about differences in success patterns associated with differing lengths of course.

(g) *Time of leaving university without success*
Whereas in the past, students leaving university without success have been identified only by the year in which they left, on this occasion one further distinction has been made. Those leaving in the first term have been differentiated from those leaving in the remainder of their first year.

(h) *Timing of survey*
The timing of the survey has made it possible, on this occasion, not only to record those students who were re-admitted for a further year's study but also to trace their progress to the end of that further year and to include those who were re-admitted for a second additional year. This means that, in the case of students on courses with a normal duration of six years, the number remaining at university up to their eighth year may be discerned.

(j) *Success in obtaining a first degree*
The phrase ' to succeed ' used in the earlier surveys was replaced in this enquiry by the phrase ' to obtain a first degree '. This means that students who entered for Honours

Printed image digitised by the University of Southampton Library Digitisation Unit

courses but obtained Pass degrees are treated as having succeeded. (On the other hand, there is some movement, also, from Pass degree to Honours degree courses.) The new definition did not, however, apply to the medical, dental and veterinary fields or to any other, such as architecture, where a degree may be awarded before the normal course is complete. In those cases—as previously—the interim award was disregarded and completion of the whole course was treated as a ' success '.

(k) '*Home assisted*' *students*
The distinction hitherto made between ' home assisted ' and ' home non-assisted ' students, made in one of the sections of the 1961 review, was found to have little significance and was therefore abandoned.

Problems of time series comparisons

15. In consequence of these differences of definition and treatment in the current survey compared with earlier enquiries, a simple comparison of the figures may be misleading. Most important of all in its statistical repercussions is the consequence of taking the potential student output, rather than input, as the 100 per cent from which percentages are derived in showing student distribution. For, whilst the total number of undergraduates normally due to graduate in 1966 is not vastly different from the total intake of undergraduates recorded, for example, in 1963, the distribution of the total into its separate parts is significantly different. Adjustment must, for instance, be made for the additional institutions covered by the current survey and for changes in the subject pattern.

16. Some attempt is, however, made in paragraphs 43 to 50 below, to compare the results of this enquiry with those of previous surveys where this can validly be done.

Qualifications and reservations

17. Apart from these differences between one survey and another, there are other difficulties of comparison, especially between one institution and another, within the current survey.

18. For example, where a university has a particular weight of emphasis towards certain fields of study, this is bound to weight its overall picture of student progress in particular directions. Thus the fact that students reading in the technological fields show generally lower success rates is bound to be reflected in lower overall success rates for the technological institutions and relatively higher success rates for institutions with few, or no, students in these subjects.

19. It must also be borne in mind that nearly all the students of the former Colleges of Advanced Technology and Scottish Central Institutions who are covered by the survey entered those institutions in 1962–63 or earlier. This was before any decision had been taken by the Government to grant them university status. The courses on which the students concerned initially embarked were, therefore, not for degrees of the institution concerned but were Dip. Tech. courses or courses for degrees of London and certain other universities. Such changes of course no doubt in themselves affected the progress of the students concerned. Moreover, the institutions concerned were consequently not in the same position as now to attract students of the requisite quality. They were also without the student health and advisory services generally established in the universities and probably had less adequate libraries and study space.

Printed image digitised by the University of Southampton Library Digitisation Unit

20. One other difficulty, if of a lesser order, to which attention may be drawn, relates to the categorisation of students who withdrew from university before completing their course. A number of them may well have done so for more than one reason—for example, academic failure may have been associated with illness or with shortcomings of discipline. But the universities were asked to ascribe the student's departure to one cause. While this probably does not have any significant effect on the overall picture, differences in the treatment of ' borderline ' cases may well affect comparisons between one university and another or between one subject group and another.

21. These are, however, the natural hazards and handicaps of statistical compression. The Committee have felt that, notwithstanding these necessary reservations, the results of this survey are of importance and should be published in full. Having pointed out the limitations, the remainder of this report will, therefore, be concerned with displaying the main facts that have emerged from the 1968 enquiry into undergraduate student progress at universities, and with making such comparisons with the results of previous surveys as seem relevant.

SUMMARY AND ANALYSIS

Distribution of Potential Student output

22. There were 35,386 undergraduate students in universities in Great Britain who might normally have been expected to emerge at the end of the academic year 1965–66 with first degrees. Of these:

27,496 (77·7 per cent) obtained first degrees within the normal period;
2,770 (7·8 per cent) did so at the end of a further year;
432 (1·2 per cent) were re-admitted in October 1967;
4,688 (13·3 per cent) left without obtaining a first degree;

23. Of those who left without obtaining a first degree, fewer than 500 (1·4 per cent) of the total potential graduate output had sat their Finals and failed. The remainder had withdrawn during their course: four-fifths of them through academic failure (9·5 per cent of the potential output) and the remainder because of illness (0·5 per cent); disciplinary reasons (0·1 per cent), or other, unspecified, reasons (1·8 per cent). (Table 1).

Success-rates by subject group

24. In Arts and in Social Studies, well over 80 per cent of the potential graduates in 1966 did, in fact, graduate in that year. By the following year, the proportion had reached about 90 per cent.

25. In both the Biological and Physical Sciences, too, 80 per cent graduated in the normal period and about 85 per cent by the following year.

26. In Engineering and Technology, however, only 68 per cent graduated in the normal period and little over 76 per cent by the following year.

27. Medicine and Dentistry showed similar, relatively low, percentages (69 and 65 per cent respectively) in normal time; but a substantially higher proportion (87 per cent) obtained their first degree by the end of a further year. (Table 1).

Printed image digitised by the University of Southampton Library Digitisation Unit

Students leaving without success

28. Apart from Architecture, the proportion of students who completed the course and then failed their degree was small, ranging from 0·2 per cent in Medicine (four people) and Dentistry (one), to around 2 per cent (184 people) in the Biological and Physical Sciences.

29. There was a much greater variation in the proportion of undergraduates who withdrew through academic failure. The figures ranged from 4·8 per cent in Arts, 5·4 per cent in Social Studies and 5·7 per cent in Medicine to almost 10 per cent in the Sciences, almost 19 per cent in Engineering and Technology and (on a relatively small figure) just under 20 per cent in Architecture.

30. There was little variation, between fields of study, in the withdrawal rate for reasons other than academic failure. In most subjects, this was around 2 to 3 per cent.

31. The overall percentage leaving without a first degree ranged from 8·8 per cent in Medicine, 8·9 per cent in Social Studies and 9·4 per cent in Arts to 13·8 per cent in the Sciences and 21·8 per cent in Engineering and Technology, whilst the 65 unsuccessful students in Architecture represented 26·5 per cent of the total who could normally have been expected to graduate in 1966. (Table 1).

Analysis between Men and Women

32. Within the normal period, women generally showed a higher success rate than men, 81·7 per cent against 76·2 per cent for men: only in Engineering, Physical Sciences and Business Management Studies were their success rates lower.

33. Extension of the period of study narrowed this disparity but overall the proportion leaving without was success was lower among women (10·6 per cent) than among men (14·2 per cent). Their failure rate in Finals was little different from the rate for men, but withdrawal for academic reasons was appreciably below the proportion for men (6·1 per cent against 10·7 per cent). This is in part a consequence of the heavy weighting effect for women of Arts (with its relatively high success rate) and of the light weighting effect of Engineering and Technology (with its relatively low success rate).

34. In most of the individual main fields of study, however, the proportion of women withdrawing before completion of their course due to academic failure was lower than for men. On the other hand, withdrawal for other than academic reasons was higher than for men in virtually every field of study (Tables 2 and 3).

Analysis between home and overseas

35. Overseas students accounted for 4·8 per cent of the undergraduates due to graduate in 1966, 4·1 per cent of those graduating in the normal period, 7·8 per cent of those graduating in more than the normal period and 7·0 per cent of those who withdrew before completing their course. Failure in the final degree examination was little higher than for home students.

36. Overall, 19·0 per cent of overseas students failed to graduate against 13·0 per cent for home students. Generally speaking, overseas students showed a higher rate of withdrawal than home students in most fields of study—often two or three times as high—with the notable exceptions of Mathematics and Computer Science (where the two students who left represented only 4·5 per cent of the overseas students in this field), and Engineering.

Printed image digitised by the University of Southampton Library Digitisation Unit

37. 65·4 per cent of overseas students were successful within the normal period of study, as compared with 78·3 per cent for home students. A much higher proportion of overseas students were, however, successful after a year's extra study, bringing the total percentages of successes, after a further year, to 78 per cent for overseas students and 86 per cent for home students. This pattern emerged in nearly every subject field. For the subjects in which overseas students were most numerous, the figures were:

Field of Study	No. of students from overseas	Success Rates			
		Overseas		Home	
		Normal period	Extended period	Normal period	Extended period
Engineering and Technology	582	61·7	13·6	69·1	7·4
Social Studies	338	72·5	9·2	85·2	5·8
Arts	229	73·4	7·9	83·0	6·9
Medicine	185	60·0	20·5	70·0	17·7
Physical Sciences	108	71·3	11·1	79·6	5·4

38. A particularly high proportion of overseas students studied Engineering. It accounted for 34 per cent of their total number (over twice the proportion for home students). This had an important weighting effect on their overall success rate. (Tables 4 and 5).

Variations in normal length of course

39. Apart from Medicine, Dentistry and Veterinary Science, the only subject group showing significant numbers in courses longer than four years was Architecture, although there were a few on 5-year courses in Agriculture.

40. Architecture showed an unusual pattern, with significant numbers of students on courses of three years', five years' and six years' duration (but none on courses with a normal duration of four years).

41. In Arts, the ratio of those embarking on 3-year courses to those on 4-year courses was 78:22; in Social Studies, 94:6; in Physical and Biological Sciences 78:22; in Engineering and Technology 60:40.

42. Whilst, for Medicine, 32 per cent were on 6-year courses, few students of Dentistry and Veterinary Science were on courses of longer than 5 years. (Tables 6 to 9).

Variation in withdrawal rates between different lengths of course

43. The percentage withdrawing was appreciably higher for those on 4-year courses (including sandwich courses) than for those on 3-year courses, although the rate of failure in final examinations was only half as much.

44. In Architecture, the 5-year courses showed a high rate of withdrawal for academic reasons. (Tables 6 to 9).

Printed image digitised by the University of Southampton Library Digitisation Unit

Time when unsuccessful students left

45. Withdrawal in the first term was only 0·4 per cent of total students. Of the 148 individuals concerned, 44 left for academic reasons, 20 due to illness, and the other 84 for unspecified ' other reasons '.

46. A further 6·4 per cent left during the remainder of the first year—most of these (accounting for 5·3 per cent) for academic reasons. This means that about half the total loss of students occurred in the first year.

47. Withdrawal in the second year amounted to 3·7 per cent, again mostly for academic reasons.

48. In the third year, the proportion leaving without a first degree was 2·1 per cent, well over half of whom were students who had sat and failed their degree.

49. In the fourth year 0·6 per cent left without a first degree, about a fifth of them having sat examinations and failed. Those leaving in later years, without success, were in negligible proportions.

50. Departure for ' academic reasons ' was highest in the first year—nearly a third of it from Engineering and Technology (all men). The next largest number was in the Sciences, followed by Arts. In each succeeding year, there was a fall in the rate of withdrawal for academic reasons.

51. Illness also took its maximum toll in the first year, gradually dropping away in the second and third years to fall sharply in the fourth year, after which it seems to have been a negligible factor. It was, throughout, particularly high in the fields of Arts and Social Studies. Similarly, loss of students for other unspecified reasons fell in successive substantial steps from the first year maximum. On the other hand, it took a little longer for the number of students leaving for disciplinary reasons to reach their maximum, which came in the second year, followed by almost as many in the third year. (Tables 28 to 32).

Variations in times of leaving for different lengths of course

52. Apart from the first term, the overall loss of students was each year proportionately higher on 4-year courses than on 3-year courses. This was particularly true in Mathematics and the Physical Sciences and in Engineering and Technology and especially so where academic reasons were responsible. In Biological Sciences, however, 3-year courses showed a proportion over twice as high as the 4-year courses and Arts, Social Studies and Agriculture and Forestry also showed higher 3-year rates. (Tables 33 to 42).

Reasons for departure without obtaining a degree

53. Of those who left without success, the reasons for leaving may be analysed as follows:

	Men	Women	Total
	%	%	%
Academic reasons	85·3	69·2	81·9
Illness	3·3	5·6	3·8
Disciplinary reasons	0·9	0·2	0·7
Other reasons	10·5	25·0	13·6
	100·0	100·0	100·0

Printed image digitised by the University of Southampton Library Digitisation Unit

The most significant difference, here, would appear to be the higher proportion of men who left for 'academic reasons' and the higher proportion of women who left for unspecified 'other reasons '.

54. Medicine was notable for its relatively low academic loss and relatively high proportion due to unspecified ' other reasons '. For women, ' other reasons ' accounted for nearly half the total number failing to graduate in this subject—virtually the same number as for academic reasons. For men, ' other reasons ' accounted for nearly 20 per cent, against 75 per cent going for academic reasons.

55. Arts showed a remarkably similar distribution of reasons for failure to graduate to Medicine, except that illness took a heavier proportionate toll. For women alone, however, academic reasons accounted for a rather higher proportion (60 per cent) and other reasons for a lower proportion (30 per cent) than in Medicine. (See Table 7).

56. The reasons for leaving without success varied considerably between universities. Academic reasons ranged from 38·4 per cent to 100 per cent of the total. Illness accounted for anything from nil up to about 18 per cent; ' other reasons ' varied from nil to about 55 per cent. Only 14 universities had any undergraduate student depart for disciplinary reasons. (See Table 72). These differences may be at least partly due to the problem of categorisation referred to in paragraph 20 above.

Comparison with previous surveys

57. Comparison of undergraduate student progress as shown by the present enquiry and as published from earlier surveys is affected by the differences of definition and of treatment mentioned in paragraphs 14–21 above. Subject to the reservations mentioned, the following comparisons emerge:

Field of Study/ Faculty	Successful in obtaining First Degree				Re-admitted but not yet successful				Left without Success			
	Input in			Potential output in	Input in			Potential output in	Input in			Potential output in
	1952	1955	1957	1966	1952	1955	1957	1966	1952	1955	1957	1966
Arts	84·1	86·3	86·0	89·7	1·6	2·1	2·1	0·9	14·3	11·6	11·9	9·4
Social Studies				90·5				0·5				9·0
Pure Science	80·5	83·1	82·9	85·7	1·7	2·3	2·4	0·7	17·8	14·6	14·7	13·8
Engineering and Technology/ Applied Science	69·4	72·4	72·5	76·4	8·2	7·5	6·7	1·8	22·4	20·1	20·8	21·8
Sub-Total	80·6	83·1	82·8	85·7	2·7	3·0	2·9	0·9	16·7	13·9	14·3	13·3
Agriculture and Forestry	N.A.	76·2	83·4	79·9	N.A.	4·4	4·4	3·3	N.A.	19·4	12·2	17·3
Total	N.A.	83·0	82·8	85·7	N.A.	3·0	3·0	1·0	N.A.	14·0	14·2	13·3

Printed image digitised by the University of Southampton Library Digitisation Unit

The most important reservation about this comparison relates to the distinction between those who are shown as ' successful in obtaining first degree ' and those described as ' re-admitted but not yet successful '. Due to the difference in timing, the current survey includes, under the first of those headings, those who were successful after one further year's study, whereas the earlier surveys did not. For the purpose of time-series comparisons, it would therefore be appropriate to group the two together.

58. The figure in the current survey of 13·3 per cent ' leaving without success ' (shown in the above table) compares with the figures shown in previous surveys of 14·3 per cent for 1957 entrants, 13·9 per cent for 1955 entrants, and 16·7 per cent for 1952 entrants. It remains much the same when all subjects are combined, including those not enumerated above.

59. Some comparison is, in fact, available, if on a more limited basis, for the fields of Medicine, Dentistry and Veterinary Science. Information on entrants in 1954 for Medicine and Veterinary Science and in 1955 for Dentistry enables the following table to be derived:

Field of Study/ Faculty	Successful in obtaining First degree				Re-admitted but not yet successful		Left without Success	
	Earlier Survey	Current Survey			Earlier Survey	Current Survey	Earlier Survey	Current Survey
		Normal Period	Extended Period	Total				
Medicine (1954)	87·3	69·1	17·9	87·0	2·0	4·2	10·7	8·8
Dentistry (1955)	87·4	65·1	21·8	86·9	3·2	1·1	9·4	12·0
Veterinary Science (1954)	82·3	62·3	21·1	83·4	2·7	4·4	15·0	12·3
Total	86·8	67·8	18·8	86·6	2·3	3·6	10·9	9·8

60. It will be seen from paragraphs 57–59 that, whatever the difficulties of direct percentage comparisons, the proportion of students who have not succeeded in obtaining a first degree continues to range between about 9 and 22 per cent of students and the relativity between the broad fields of study remains much the same throughout the time series. Medicine, Dentistry and Veterinary Science show little difference in their success rates from their earlier pattern; Arts and Social Studies continue to show a relatively high success rate, Pure Science a little lower and Technology quite a bit lower still. Technology still shows much the highest percentage leaving without success, with Pure Science and then Arts and Social Studies some way behind. Agriculture and Forestry and Veterinary Science both still hold their intermediate position, if with some apparent swing between the two of them.

61. The following table shows that, on a straight comparison, the overall reduction from 14·2 per cent to 13·3 per cent in the loss rate is due entirely to a reduction in those failing in their final examinations and that there has been no significant change in the proportions departing without success for any other reasons. It should be noted, however, that if the comparison is confined to the university institutions covered in the 1961 survey, the 1968 survey's overall loss rate falls from 13·3 per cent to 11·4 per cent and the percentage withdrawing for academic reasons falls from 9·5 per cent to 7·8 per cent.

Printed image digitised by the University of Southampton Library Digitisation Unit

Reason for departure without success	1961 Survey (1957 Input) %	1968 Survey (1966 Potential Output)	
		Unadjusted %	Adjusted for Comparability %
Failed in final examinations	2·4	1·4	1·3
Withdrew for academic reasons	9·4	9·5	7·8
Withdrew through illness	0·6	0·5	0·5
Withdrew for disciplinary reasons	0·1	0·1	0·1
Withdrew for other reasons	1·7	1·8	1·7
Total percentage leaving without success	14·2	13·3	11·4

62. In the commentary on the earlier surveys in University Development 1957–62, attention was drawn to the lower success rates in technology and the applied sciences. This arose, in the main, from the heavier withdrawal rate than in other fields of studies in the first and second years of the course, while there was a closer parity in the third and fourth years. Much the same holds true this time. The wide variation between university institutions in the incidence of this loss rate is again a feature of this enquiry as it was for the survey carried out in 1961. Then it ranged from 5·1 to 36·1 per cent (and 20·8 per cent overall); this time it ranges from 3·9 to 39·5 per cent (21·9 per cent overall).

63. Yet another similarity between the results of the present and past enquiries is the relatively high proportion of students in medicine, dentistry and veterinary science who took more than the normal period to complete their courses successfully. The differential has, however, appreciably narrowed, as the following table of percentage successes brings out:

Field of Study/ Faculty	Previous Survey		Current Survey	
	In normal period %	In more than normal period %	In normal period %	In more than normal period %
Arts	80·4	5·6	82·8	6·9
Social Studies			84·4	6·1
Pure Science	77·7	5·2	79·9	5·8
Engineering and Technology/ Applied Science	64·8	7·7	68·3	8·1
Agriculture and Forestry	75·9	7·5	70·8	9·1
Medicine	57·7	29·6	69·1	17·9
Dentistry	57·2	30·2	65·1	21·8
Veterinary Science	51·0	31·3	62·3	21·1

The figures for the 'previous survey' given above, relate to 1957 entrants for all subjects except Medicine (1954), Dentistry (1955) and Veterinary Science (1954). The current survey relates to the potential 1966 output for all subjects.

64. A further comparison, by year of withdrawal or failure to graduate, again shows similarities. As before, the current survey relates to the potential 1966 output for all subjects, whereas the previous survey relates to the actual 1957 input for all subjects other than Medicine (1954), Dentistry (1955) and Veterinary Science (1954):

Printed image digitised by the University of Southampton Library Digitisation Unit

Field of Study/ Faculty	Survey	Year of withdrawal or failure to graduate						Total
		1st Year %	2nd Year %	3rd Year %	4th Year %	5th Year %	6th Year %	%
Arts and Social Studies	Previous	5·9	2·9	2·4	0·7	—	—	11·9
	Current	5·1	2·3	1·4	0·5	—	—	9·3
Pure Science	Previous	6·2	4·6	2·9	1·0	—	—	14·7
	Current	7·3	3·7	2·4	0·4	—	—	13·8
Engineering and Technology/ Applied Science	Previous	10·4	6·3	2·7	1·4	—	—	20·8
	Current	11·3	6·8	2·9	0·6	0·2	—	21·8
Agriculture and Forestry	Previous	7·3	0·9	2·5	1·5	—	—	12·2
	Current	10·9	3·8	2·2	0·2	0·2	—	17·3
Medicine	Previous	1·3	3·7	2·7	2·1	0·5	0·4	10·7
	Current	2·2	2·9	1·9	1·2	0·3	0·3	8·8
Dentistry	Previous	3·7	3·9	0·6	0·6	0·2	0·4	9·4
	Current	4·1	3·5	3·0	0·7	0·7	—	12·0
Veterinary Science	Previous	5·3	3·9	4·8	1·3	0·9	—	16·2
	Current	3·1	3·5	3·5	2·2	—	—	12·3

In Agriculture and Forestry, withdrawal now appears to be earlier and heavier, especially in the first year, but the analysis is of relatively small numbers. With a similar qualification, the percentage unsuccessful in Veterinary Science is lower than previously, especially in the early years. A quarter of Medicine's low loss rate now comes in the first year.

SUMMARY AND CONCLUSIONS

65. Insofar as comparisons can be made, this survey shows much the same general pattern of student progress, both overall and by subject groups, as the surveys previously carried out by the Committee. Some 77·7 per cent of the students successfully completed their course in the normal time, 7·8 per cent after a year's extension, and 1·2 per cent are continuing for a second additional year. Failure to graduate (including failure in final examinations) accounted for 13·3 per cent of all students in the survey. This was less than it had been on the previous survey—due entirely to a reduction in the proportionate loss of students for academic reasons—and if the universities not covered by the previous survey are excluded, for uniform comparison, the fall is greater still. About half the total number failing to graduate left in the first year of the course.

66. The Committee have (with the concurrence of the Vice-Chancellors' Committee) thought it right to publish the results of this enquiry in full. They recognise that the detailed figures are open to misinterpretation: but they wish to encourage informed discussion of this important subject. They have thought it best, in this report, merely to draw out the main factual conclusions from their analysis of the material, rather than to include value judgements.
